SPADE Administrative Note #116

J. Postel
18 June 71

M. Ambrose

I've been working night and day on an interactive Fortran program (with in-line symbol code) which plays DAMA--like Chinese Checkers (for two players) on a chess board. Dr. Luckham played it and beat it, but it didn't make any horrendous blunders.

I plan to improve it before releasing it for general use.

NEXT WEEK

Catch up on missed meals, sleep and showers.

T. Gomez

I have been working on modifying Meta-Symbol to run under SEX. A preliminary, no-good version should be out pretty soon. I have to keypunch it.

NEXT WEEK

Same as above.

M. Kampe

1. Finished operator portion of RJSNET.

NEXT WEEK

Work on Data Transfer in RJSNET.

W. Naylor

1. Attended design sessions.
2. Found bug in NWLOGGER which causes it to fail if its send connection shared page is filled. (Hope to fix by meeting time)
3. Made changes to NETSTAT to allow faster (i.e. process controlled) switching of network state.

J. Postel

W. Naylor cont.

4. Designed modes to NETSET to take advantage of 3 and do the following:
 - a. create and modify "MEASX" type files
 - b. create and modify a list, to be used by NETSTAT, consisting of a sequence of files together with their time of use.

NEXT WEEK

1. Attend design meetings.
 2. Modify NETSET AND NETSTAT to do 4 above.
 3. Debug NWLOGGER and TELNET.
-

J. Wong

1. Put in more comments to the new NCP. It is about 70% commented now. This is a pain!!
2. Started on the documentation of the new NCP.
3. Debugged the network with Jon and Bill, mainly on the new Telnet.
4. Supplied Howard with information regarding status of connection by attaching DEBUG to the running NCP. When he tried to sign on to MIT.

NEXT WEEK

1. More comments and documentation on the new NCP.
2. Hope to have better progress in my thesis (System Measurements). Very little was done this week.
